

RED-LINE BAR CONVERSION KIT 2009

April 22th 2009
For immediate release

The 2009 Red-line bar is the first Best Bar to use an equal front and rear line calibration, with the bar at the max-power position the front and back lines are of equal length. This will be the standard bar calibration for all future control bars from Best.

The Red-line Bar and the Kahoona kite are the only 2009 products that are set-up for this calibration; this means that when using a Red-line Bar with a Waroo, Nemesis-HP or Guroo kite the user must also use the 'Red-Line Bar Conversion Kit'. The conversion kit is a pair of pigtails that, when added to your flying lines, compensate for the difference in length between the Red-line Bar and the 2009 Best Bar.

To use your Red-Line Bar with a Guroo, Waroo or Nemesis-HP follow the instructions below to extend your rear flying lines by adding a conversion kit pigtail to each rear flying line.
